SOC-NIDS // THREAT COMMAND

Security Operations Center - Network Intrusion Detection Report

EXECUTIVE SUMMARY

This report contains analysis of 49 security alerts detected by the SOC-NIDS Threat Command system. 38 critical/high severity incidents were identified requiring immediate attention.

CONCLUSIONS & RECOMMENDATIONS

The SOC-NIDS system continuously inspects network flow telemetry using hybrid ML and signature detection. Continued monitoring, signature updates, and periodic validation of detection thresholds are recommended to maintain optimal network defense.
