SOC-NIDS // THREAT COMMAND

Security Operations Center - Network Intrusion Detection Report

EXECUTIVE SUMMARY

This report contains analysis of 64 security alerts detected by the SOC-NIDS Threat Command system. 53 critical/high severity incidents were identified requiring immediate attention.

KEY METRICS

64	53	11	0
TOTAL ALERTS	CRITICAL/HIGH	MEDIUM	LOW

ALERT DETAILS

Time	Type	Severity	Score	Source	Summary
8.653882	PortScan	HIGH	88.0%	192.168.1.89	Simulated TCP SYN PortScan Burst (60 por
0.411032	Dos	HIGH	90.0%	192.168.1.163	Dos (high)
0.519056	WebAttack (XSS)	HIGH	95.0%	172.16.1.50	Simulated XSS Payload: <script>alert(doc
12:00:00	PortScan	HIGH	92.0%	192.168.1.99	Test alert
12:00:00	PortScan	HIGH	92.0%	192.168.1.99	Test alert
12:00:00	PortScan	HIGH	92.0%	192.168.1.99	Test alert
4.924032	WebAttack (XSS)	HIGH	95.0%	172.16.1.247	Simulated XSS
3.988095	PortScan	HIGH	85.0%	192.168.1.63	Simulated PortScan
0.952018	DoS	HIGH	90.0%	10.0.0.249	Simulated DoS Flood
0.900322	PortScan	HIGH	85.0%	192.168.1.46	Simulated PortScan
3.190401	WebAttack (SQLi	HIGH	95.0%	172.16.0.44	Simulated SQLi
1.541833	PortScan	HIGH	85.0%	192.168.1.166	Simulated PortScan
7.527706	PortScan	HIGH	85.0%	192.168.1.187	Simulated PortScan
2.231236	WebAttack (XSS)	HIGH	95.0%	172.16.1.143	Simulated XSS
4.641817	PortScan	HIGH	85.0%	192.168.1.123	Simulated PortScan
9.470607	PortScan	HIGH	85.0%	-	Simulated PortScan
2.674600	DoS	HIGH	90.0%	-	Simulated DoS Flood
2.705155	WebAttack (XSS)	HIGH	95.0%	-	Simulated XSS
2.086667	WebAttack (SQLi	HIGH	95.0%	-	Simulated SQLi

1.429296	DoS	HIGH	90.0%	-	Simulated DoS Flood
7.071068	PortScan	HIGH	85.0%	-	Simulated PortScan
2.638365	DoS	HIGH	90.0%	-	Simulated DoS Flood
2.770925	PortScan	HIGH	85.0%	-	Simulated PortScan
6.127667	PortScan	HIGH	85.0%	-	Simulated PortScan
9.559310	WebAttack (XSS)	HIGH	95.0%	-	Simulated XSS

CONCLUSIONS & RECOMMENDATIONS

The SOC-NIDS system continuously inspects network flow telemetry using hybrid ML and signature detection. Continued monitoring, signature updates, and periodic validation of detection thresholds are recommended to maintain optimal network defense.
